

Agriculture can play a key role in preventing plastic and packaging waste.

Did you know? A third of the over 2.5 million tonnes of solid waste we dispose of in B.C. each year is plastics, paper, and other packaging-like materials.

Until July 23, 2024, the Province is seeking ideas on how to prevent non-residential plastic and packaging waste.

We want to hear from farmers, producers, growers, retailers and others in the Agriculture sector on how to keep packaging out of our landfills and environment.

Why should you participate?

-  Share what's working in agriculture now, and what you'd like to see more of in the future.
-  Provide feedback on how certain policies and regulations might impact you.
-  Ensure government understands and considers the challenges and opportunities farmers and producers across B.C. face on this issue.
